Heuristic Evaluations

Heuristic Violated	Description + Screenshots	Rating	Suggestions
Aesthetic and minimalist design	<p>The home screen is cluttered with unnecessary information and features such as the weekly activity bonus.</p> 	3	Redesign the home screen to prioritize things that may be more useful, such as the activity map.
Consistency and standards	<p>The floating action button (plus button) has different actions based on the tab the user is on (and doesn't appear on other tabs), which may be confusing to the user.</p> 	4	Have one floating action button that is consistent across the activities, which can host the most important actions. Move some less important/more screen-specific actions to their respective screens instead of using the common FAB.

Help and documentation	<p>There is no documentation or help screen to guide users through this expansive app, and it may be challenging for users to approach.</p>	2	<p>Add tutorials for the users when they first start out the app, which may be designed like a game tutorial where features are individually presented to the user before they are allowed to use them, or as an overlay to point out each feature in a given screen.</p>
Flexibility and efficiency of use	<p>There is no way to cancel on a workout besides having to click into its details and cancel, which is less efficient than being able to do it in bulk right on the list.</p> <div data-bbox="527 966 966 1077">  <p>Chest Tomorrow 7AM-8AM Hart House Gym</p> <p>Host:</p>  </div>	2	<p>Give the user the ability to hold and select multiple workouts and delete, or swipe to delete.</p>

			
Error prevention	Despite having confirmation dialogs when cancelling participation or cancelling a hosted event, the button to initiate the cancellation is way too big and prominent, which makes it a lot easier to click on.	3	Move the cancel button to a hamburger menu at the top instead, and change the bottom button to something more desirable such as sharing.

			
Aesthetic and minimalist design	<p>The graphs being displayed in the profile page directly creates clutter and makes the whole page more cramped than it is, and it is hard for the user to read since it has to be in such a small space.</p> 	2	Instead of outright displaying the graphs in the profile page, display simplified stats about each category, and show the users a detailed graph when they decide to click on it.
Consistency and Standards	<p>The buttons in the purchase confirmation dialog is not consistent with other confirmation</p>	2	Keep the styles consistent.

	<p>dialogs in the app, especially with the affirmative action placed on the left instead of on the right.</p> 		
Flexibility and efficiency of use / Aesthetic and minimalist design	<p>The skill tree needs some TLC, as currently it is a bit disorganized, and the structure is unclear.</p> 	2	Reorganize this into an actual skill tree with zoom-in ability, and colour code it better to show what is available/purchased/locked.
Flexibility and Efficiency of Use	<p>After doing a search, there are ways to remove filters, but no way to add filters or modify the search easily.</p> 	3	On this page, add a button that will bring up a similar dialog to the search criteria dialog with current information filled in that will help users initiate another search.
Consistency and Standards	The buttons on the current workout page again are not consistent with the affirmative	2	Flip the location of the buttons.

	<div>action on the left.</div> <div><div>Next</div><div>Pause</div></div>
